# Problem Statement and Solution Approach

## Problem Statement:

“An automobile parts manufacturing company has collected data of transactions for 3 years. They do not have any in-house data science team, thus they have hired you as their consultant. Your job is to use your magical data science skills to provide them with suitable insights about their data and their customers.”

## Solution Approach:

Agenda of this project to identify the underlying pattern of customer of an automobile part manufacturer, based on the past 3 years of the Company's transaction data. Solution approach will include performing EDA, customer segmentation using RFM analysis on given dataset and thus recommend customized marketing strategies for different segments of customers.

## Key observations:

- Based on Correlation analysis, Quantity ordered and Sales are highly correlated
- Price of Each order and Sales, MSRP and Price of Each order are highly correlated; Sales and MSRP are least correlated with Days since last order

# Multivariate Analysis - Pair plot

- Pair Plot analysis among all parameters additionally displays the correlation among them.
- Key correlation observed among: Quantity ordered and Sales, MSRP and PRICEEACH

# Customer Sales analysis

## Key observations:

The company currently has 89 Customers from 19 countries across the globe. Euro Shopping Channel is the largest customer, with 9.34% of the total customer share.

# Customer – Average Sales analysis

## Key observations:

In terms of Average Sales, Super Scale Inc. is the highest, followed by Mini Caravy and La Corne

# Analysis by Product Line

# Analysis by Product Line - Average Sales

Madrid, San Rafael and New York are the top 3 cities in terms of sales

# RFM Analysis Overview and Approach

## ❖ RFM Analysis objective:

- RFM stands for Recency, Frequency, and Monetary value and is a data driven customer behavior segmentation technique.
- The analysis segments customers based on: When their last purchase was (recency), How often they have purchased in the past (frequency), and How much they have spent overall (monetary)
- RFM measures have proven to be effective predictors of a customer's willingness to engage in marketing messages and offers.

## ❖ RFM Parameters used:

- Customer name, Quantity ordered, Price each, Order date, Order quantity and Sales

## ❖ RFM Prediction used:

- **Recency** - Max Order date
- **Frequency** - Count of quantity orders for a particular customer
- **Monetary** - Sum of sales made through a particular customer
